

## **Installation Guide**

Digital Butler

Team Digital Butler

12/3/2017

### **How to run project:**

Download and install node.js 6.x

#### On a terminal

Change(cd) into directory of desired location of project files

git clone <<https://github.com/NimaBaz/Digital-Butler>>

cd Digital-Butler

npm install

npm install -g @angular/cli

ng serve

\*\*\*\*\*

### **How to check in code:**

git add .

git commit -m "try to be concise with message for debugging"

git pull

if there are merge conflicts do

git mergetool

and merge the appropriate lines of code

after all merge conflicts are resolved

git push

\*\*\*\*\*

### **How to create new project after setup:**

(This method creates all of the files that an angular project has)

npm install -g @angular/cli

ng new 'projectName'

cd 'projectName'

ng serve

\*\*\*\*\*

### **How to run d3 charts correctly:**

cd Digital-Butler\src\app\components\d3chart\heatMap

C:\Python27\python.exe -m SimpleHTTPServer 8000

you will also need to allow cross origin request
